

Microsoft Teams

Everyone's talking about Teams!

Microsoft Teams is a Skype-like application that runs on your PC, tablet, or mobile that offers voice and video calling.

When bridged to the public telephone network it can be used as a normal phone solution.

Teams can run strictly as an app on your existing smart devices or be supplemented with dedicated desk phones.

DialPlan does it all

- Teams only solutions
- Regular VoIP cloud-based phone solutions
- Hybrid regular phone and Teams solutions

Hybrid telephony solutions?

The comprehensive functionality of Teams, and associated cost, isn't always necessary or suitable for areas like reception, classrooms, or communal spaces like staffrooms.

Additionally, there is a significantly higher equipment cost associated with Teams capable hardware, and limited options.

The sophisticated Dial Plan hybrid solution offers the flexibility to enjoy the advantages of Teams where you need it without the additional costs where you don't.

Our hybrid solution includes the full power of our cloud PBX for after hours menus, school holidays, absentees voicemail, and also integrates with our bell scheduling, & lockdown solutions.
